HQF Series Lamp-Pumped Dual-Wavelength Long Pulse Laser (2940nm & 1064nm)

HQF series lamp-pumped dual-wavlength long pulse laser consists of a near-infrared laser module unit, a mid-infrared laser module unit and an energy detection module. This laser outputs dual wavelengths of 2940nm and 1064nm. Since different wavelengths target distinct chromophores and exhibit differential tissue penetration depths, they can be synergistically combined in clinical treatments. The system features high energy output, exceptional stability, and uniform beam distribution. Compatible accessories include output fibers, articulated arms, control panels, power supplies, and water-cooling units.
